

# PERIVALLON TOOL CARDS

The PERIVALLON project aims to deliver an improved intelligence picture of organised environmental crime and develop tools for **detection, prevention, and impact assessment**. It uses geospatial intelligence, remote sensing, online monitoring, and predictive analytics to enhance investigation processes and methodologies.

These cards present **13 tools**, each a result of the development and validation efforts within the PERIVALLON project.

## Risk assessment module

Exploitation Type

Commercial

Partner in Charge

etra|+D

### Description

Facilitates law-enforcement decision-making by fusing heterogeneous data sources to assess the likelihood of environmental crime and provide real-time risk levels during incidents.

### At a glance

Real-time environmental crime risk insights for informed decision-making and targeted resource allocation in law enforcement operations.

Who is this tool developed for?

Law enforcement agencies

NGOs focused on environmental protection

Private industries with high environmental impact

Environmental protection agencies

Municipalities & governments

### Use Case

Incident-level risk assessment by integrating diverse data streams to prioritise enforcement actions against environmental offences.

### Benefits & Added Value

- Enables accurate, timely risk assessments of environmental crime threats.
- Improves resource prioritisation and supports decision-making for more effective protection of European citizens.

Co-funded by the European Union
